

EAVX

THE FUTURE IS FULLY INTEGRATED

VX Control enables the widest array of technologies to be connected, configured and centrally controlled to deliver driver safety, higher efficiency, lower operational cost and greater value – transforming the road ahead.

EAVX

CONNECT. CONFIGURE. COMMAND.

INCREASED FLEXIBILITY

Regardless of chassis or powertrain, the VX Control digital infrastructure connects and commands the widest array of technologies to deliver added functionality in safety and automation.

FUNCTIONALITY OPTIONS

Controlling and information status for components such as lighting, locks, cameras, battery capacity, secured tools, preventative maintenance, route optimization and vehicle indicators combined into a single source digital screen.

IMPROVED DRIVER & OPERATOR EFFICIENCY

VX Control augments the driver's situational awareness and provides automated control to streamline vehicle functions – promoting safety, efficiency and productivity.

INCREASED INFORMATION/ REDUCED DISTRACTION

Simplification and consolidation of information into a single digital screen.

CONNECTIVITY

The ability to communicate real time information between vehicles and to central fleet operations.

RETURN ON INVESTMENT (ROI)

Combining capabilities and efficiencies within the body upfit, to reduce operational cost and increase uptime.

SMART AND REDUCED WIRING

Digital design creating efficiencies to reduce weight, over wiring and diagnoses.

STREAMLINED INTEGRATION

Solutions based integration of safety, security, prevention and alternative ePTO power features, designed for installation at upfit.
